

**ROAD INTELLIGENCE**

## **CLEAN AND DUST-FREE ENVIRONMENT IS EVERYONE'S CAUSE**

Soon it will be time for spring cleaning and removal of sand and debris from sidewalks. Once again you are going to see young children with their parents in the middle of dust-cloud waiting in the crossing and during your commute you can see and hear people coughing at bus stops. That is something that should not be allowed in modern urban areas today, but unfortunately it still happens. And it affects all of us.

### **Efficiency and environmental issues must be demanded in the invitation for tenders for road cleaning contracts**

Removal of sand and dust efficiently and environmentally friendly requires good workmanship and top of the line equipment. The buyer of the contract can affect these issues when drawing up tenders. Making right choices in the tender process can have huge effect on the implementation of healthy and environmentally friendly modern work methods and as a result we can achieve better living conditions. Buyers and contractors who feel their responsibility in achieving cleaner and more breathable city air are the key to the solution.

### **Better cost efficiency through measuring the performance of road cleaning equipment**

Cost efficient road cleaning is the best way to achieve clean and healthy city environment. Through better performance come also much more lucrative contracts. The whole range of Arctic Machine's CAT collecting sweepers come with powerful watering system that moisturizes and binds dry material and makes the road cleaning process almost dust free. Compared to traditional open sweepers and collecting sweepers without watering system this makes Arctic Machine CAT sweepers a much better choice for a clean and fresh environment.

### **AM CAT sweepers have linear floating mechanism for the main brush**

Linear movements of the main brush make sure that the work result is always clean and neat. The distance between main brush and collector stays the same, thus ensuring effective collecting and cleaning. Front brushes lift the sand of the surface and brushes on both sides of AM CAT prevent the dust and sand from spreading all over. The big wheels of the AM CAT make it easy and reasonably light to roll around. Maneuverability makes the road cleaning work also faster and more economical.

**Arctic Machine** is Finnish manufacturer of high quality road maintenance equipment. The main goal of Arctic Machine is to make roads safer for people to use them by developing efficient road maintenance equipment that work reliably in all conditions.
