

WASHING AND CLEANING SYSTEM AM SCW AND SST

**Environmentally
-friendly
and clean
outcome**

AM SCW and SST is an extremely effective, versatile, and environmentally-friendly washing and cleaning system. It is equipped with a large stainless steel tank, an efficient frontal washing system, and a powerful pressure wash unit.

You can control the fan and the point exhaust nozzles individually during washing. This enables you to pressure wash streets, market squares, industrial areas, bridges, rails, bus stops, safety posts, platforms, and numerous other things easily with the same unit.

ROAD INTELLIGENCE

Large capacity ensures productivity

Thanks to AM SCW's and SST's large tank capacity, you will have plenty of dust binding liquid, even on long gravel roads, which reduces the working time substantially. The large tank is also ideal for watering plants, bushes, and trees in parks and on road banks. Additionally, it is excellent for freezing skating rinks and binding dust at race tracks (e.g. trotting courses) as well as watering dry surfaces during large public events.

Because AM SST's tank is made of stainless steel, it is also suitable for transporting household water during catastrophes. AM SCW's pressure wash hose is equipped with electronic reeling and a special nozzle. Therefore you can use it for washing and cleaning large areas and special targets, which cannot be reached with a vehicle.

Pictures may contain accessories.

Technical information	AM SCW AND SST
Tank capacity	8, 10, 12 or 15 m ³
Delivery pressure	c. 400 l/6–8 bar
Working width of the injection pipe's pressure wash	2,500 mm
Flat nozzles	2
Exhaust nozzles	1
Injection pipe for the nozzle	1
Hydraulic pump	60–78 l/min, 200 bar
Pressure hose length	20 m
Accessories	Watering pipe system, water pump's suction device, diesel engine
