## APPLICATION

FOR STREET CLEANING 

FOR LORRIES 

FOR ALL AREAS 

## FOR DIVERSE USE

The AM LQT spreader tanks can be used for anything from street cleaning to the distribution of food-grade water. The purpose of use can easily be modified with optional accessories later. The tanks have a flexible structure and high impact-resistance even in cold conditions, which increases the AM LQT's service life and creates cost

savings. The AM SCW wash head is a versatile set of wash equipment that makes it easier to clean hard-to-reach places. The wash head features a hose with electrical reeling and special nozzles for sprinkling water or pressure washing. The washing angle and height of the jet pipe can be adjusted, as can the separate nozzles, which increases the profitability of the AM SCW.
